

ISO 14001 Environmental Management Systems

Preamble

ISO 14001 is an internationally recognized standard for the environmental management systems. This standard complements and facilitates the existing practices which an organization may have implemented. Its specification outlines an EMS designed to address all facets of an organization's operations, products, and services. The purpose of this standard is to help protect the environment, to prevent pollution, and to improve their environmental performance.

ISO 14001 promotes the development of processes to maintain environmental compliance. Although legal compliance may be taxing or elusive, the standard expects organizations to implement processes to demonstrate and maintain such compliance, hence significantly diminishing business liability.

The standard requires the establishment of an environmental management framework by which an organization's impacts on the environment can be systematically identified, minimized and eventually eliminated, thus preserving and sustaining the environment for future generation.

Our Approach

GlobalGROUP specialize in Certification backed by an efficient IT system and a group of professionals and experts. Our line of experts provide you with the process approach audits aimed at promoting continual improvement enabling your organization to remain competitive globally.

We eliminate red tape and bureaucracy and provide you with the most cost effective audits which explains why we still remain as an aggressive competitor in the certification business.

We minimize the need for your organization to rely on inputs from consultants.

Services

Global offer a suite of services related to ISO 14001, ranging from:
